Case Resolutions

Please visit <http://support.loqate.com/2020q3-0-resolved-cases/> for a list of cases resolved in this release.

If you would like more details on any of the solved cases listed, please contact support@loqate.com for further information.

Install Manager Improvements

Md5sum

Install Manager version 13.0.0 makes improvements to the way the md5sum are processed. Md5sums to files (data files, certification data files, and certification library files – server version) will now be processed after the datapacks are downloaded. In previous install manager versions, both the server and local data files were created at the same time, only the timestamp will be slightly earlier compared to the local md5sum version.

Local API Improvements

Server Option: IgnoreUnmatched

When using the server option IgnoreUnmatched, in the Loqate Demonstration UI (lqtDemo.exe), users may have seen empty results. This is now resolved and IgnoreUnmatched will function as expected. Additional information on how to use this server option can be found on the support site [here](#).

Alignment Improvements

Users may experience unexpected behavior with PO Box results when the correct postal codes were included. This is resolved and PO Box will now return the expected addresses.

Please check Install Manager for the latest versions of AMAS and CASS.
